

Phase 10d Filter State Polish

Branch: phase-10d-filter-state-polish
Goal: make Memory Corridor filter state obvious, clearable, and impossible to get stuck in before kiosk testing.

What changed.

The corridor now renders active filter pills from one authoritative state path. Year and Class-of are mutually exclusive time filters. Topic/theme remains a separate theme filter. When no filter is active, the entire pill row is hidden, so no orphan X or switch appears.

Behavior Summary

- Default state shows **All town-gown Darts & Pats**, 616 records, and no clear control.
- Year filters show a pill such as **Year: 1992 ✕**; tapping it clears all corridor filters and returns to all records.
- Class-of filters show a pill such as **Class of 1999: 1996–1999 ✕**; tapping it clears the memory window and closes the tray.
- Topic filters show a **Theme: ... ✕** pill. Multiple active filters show multiple pills plus **Clear all**.
- Start Over, idle reset, Show all years, global Reset, and clear pills all use the shared corridor clearing path.
- Word Breeze stopwords include sent/send/sends/sending; screenshots and DOM checks confirm the displayed terms do not include Sent.
